# Urbanization and land-use development in Europe

ESPON peer-learning workshop 20 May 2021

David Evers

# ESPON SUPER terminology

- **Sustainable** (temporal balance and thematic balance)
- **Urbanization** and land use (measurement and explanation of phenomenon)
- **Practices** (land-use decision-making, effectiveness of planning)
- in **European Regions** (territory matters, regional approach)

## Evidence on urbanization and land-use developments in Europe

Long term development of population

Regional level: NUTS 3 (2016)  
Source: ESPON SURVEY, 2019  
Origin of data: Eurostat, National statistics offices  
© 2020 ESPON for administrative investigations

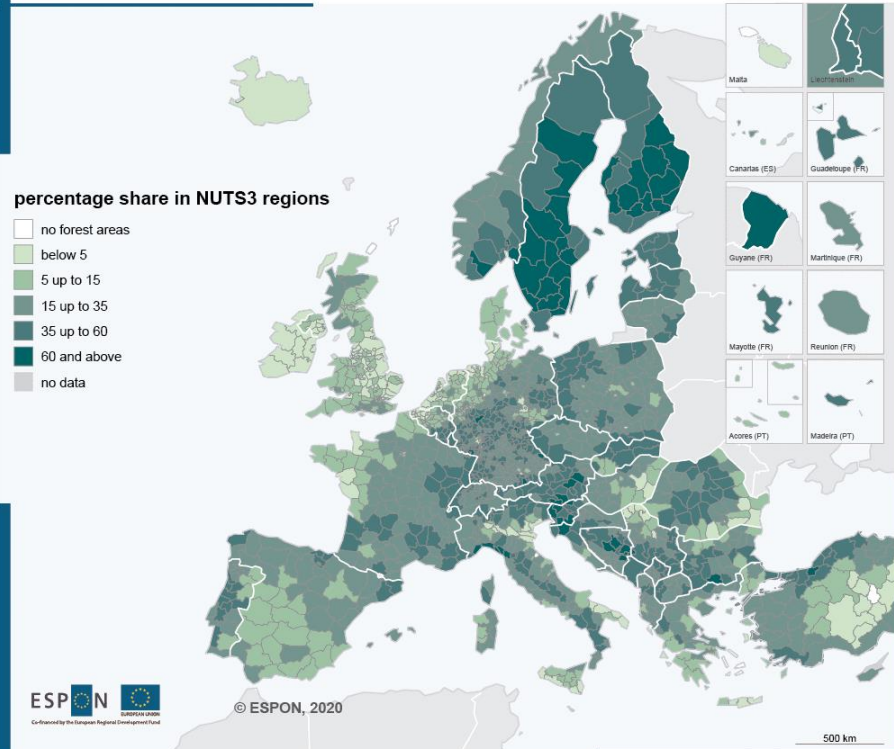

Development of Urban Use by Day 2000 - 2018

Regional level: NUTS 3 (2016)  
Source: ESPON SURVEY, 2019  
Origin of data: Corine Landcover, 2018  
© 2020 ESPON for administrative investigations

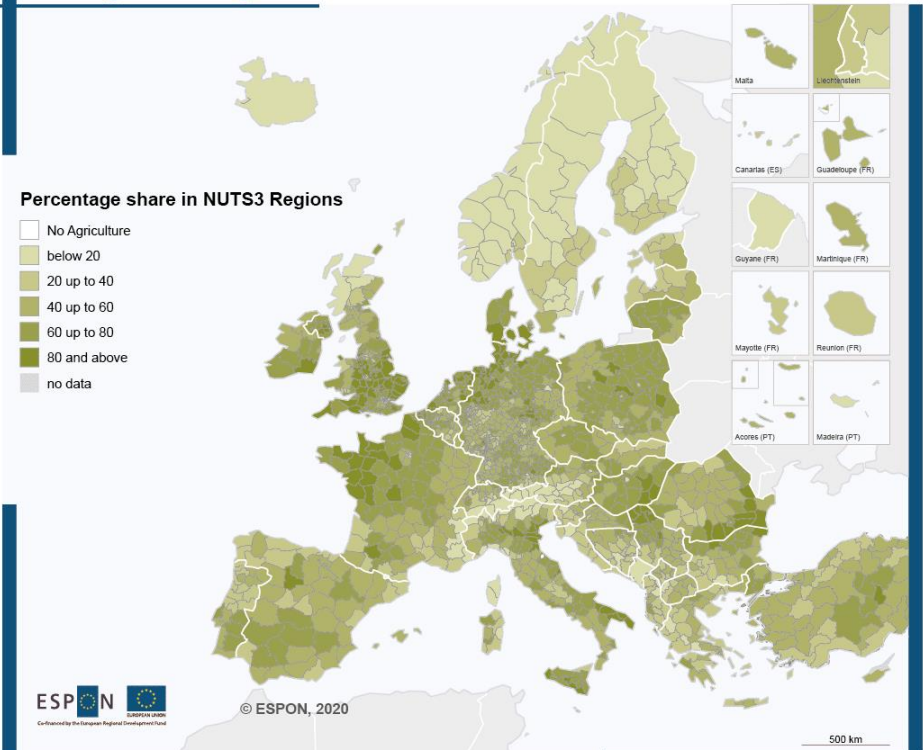

# Natural and agricultural development

Share of forest areas 2000

Regional level: NUTS 3 (2016)  
 Source: ESPON SUPER, 2020  
 Origin of data: Corine Landcover, 2019  
 UMS RIATE for administrative boundaries

Percentage Share of Agricultural Areas 2000

Regional level: NUTS 3 (2016)  
 Source: ESPON SUPER, 2020  
 Origin of data: Corine Landcover, 2019  
 UMS RIATE for administrative boundaries

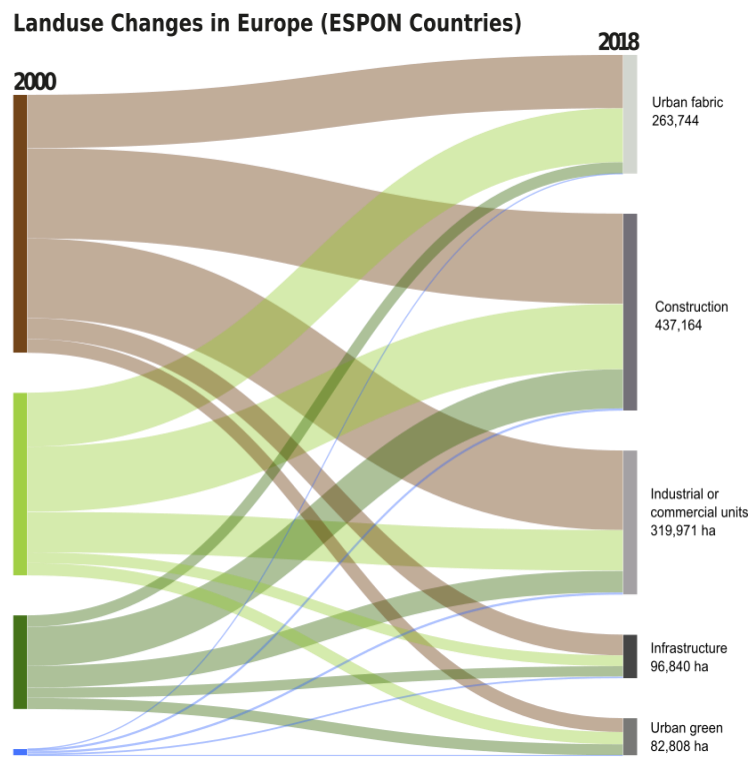

# Natural and agricultural development

Figure 3.2: Conversion of agriculture to nature and nature to agriculture per country in the period 2000-2018 (for countries with a total conversion of more than 10.000 ha)

Between 2000-2018, about 1.17 million hectares of land was converted into urban use.

This is approximately 250 football fields per day (>0)

## Share of urban use areas 2000

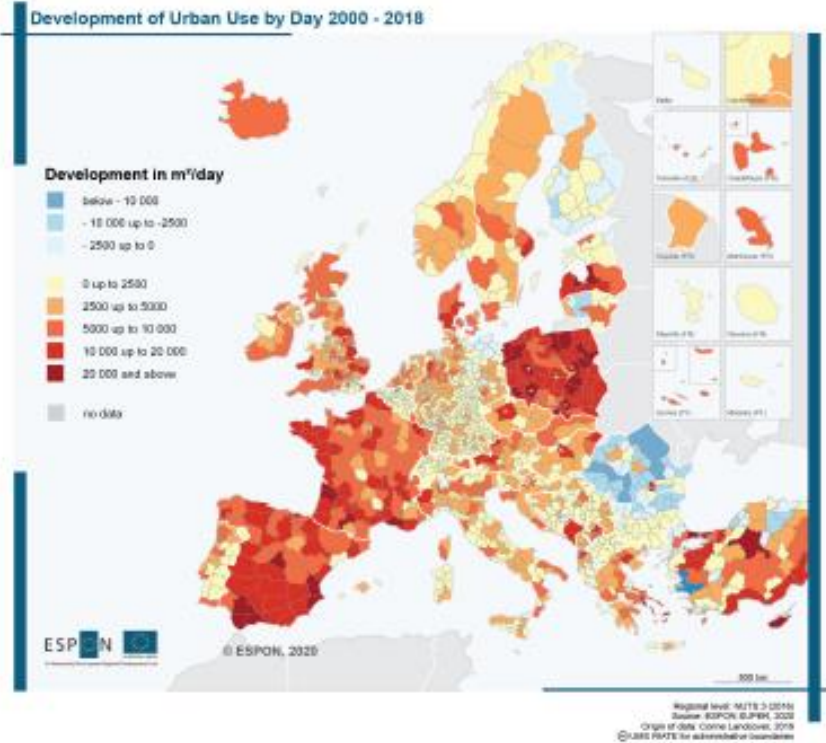

### percentage share in NUTS3 regions

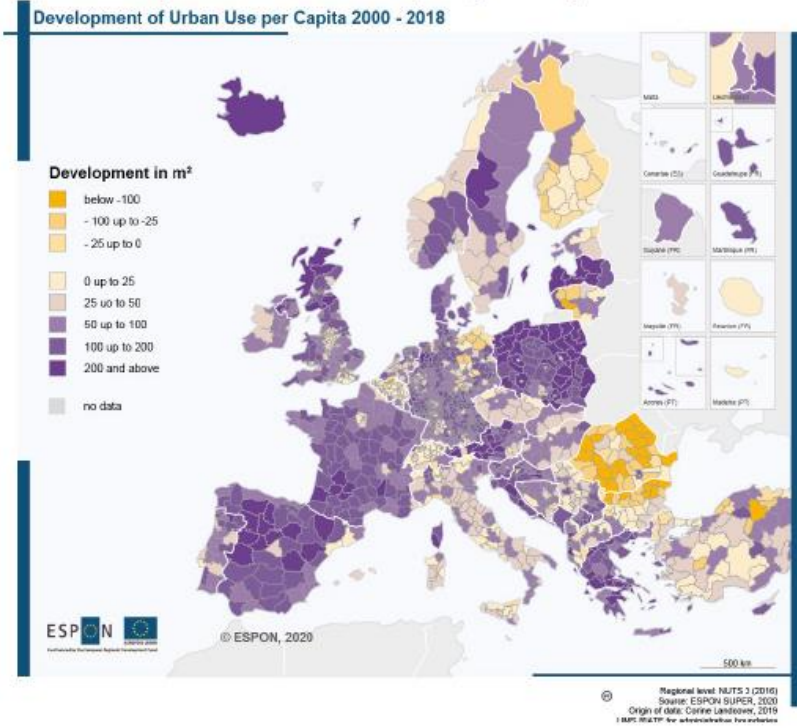

© ESPON, 2020

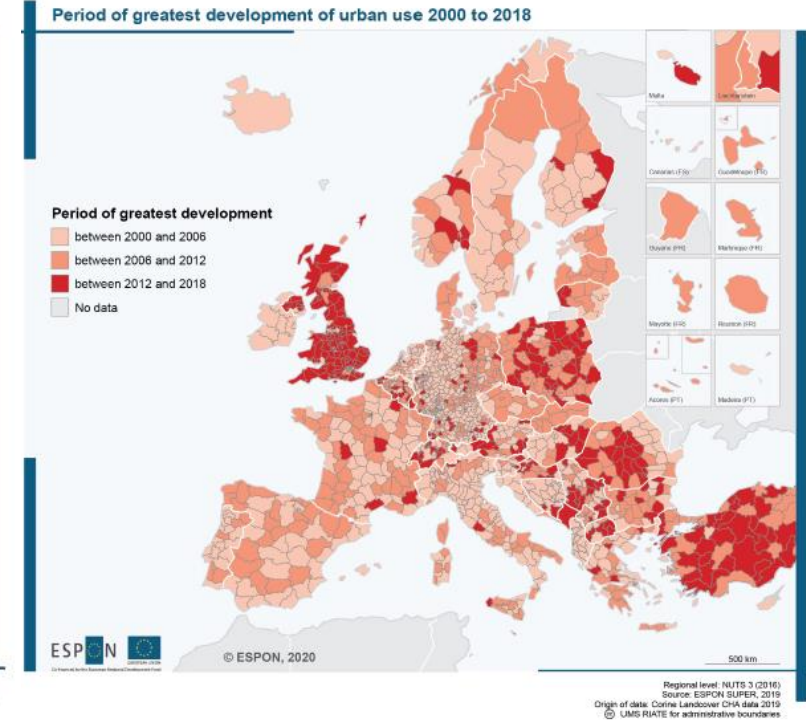

# Is this sustainable?

Absolute ha/day

Development ha/capita

Speeding up or slowing down?

# Urban form: easy to see, hard to measure

# Morphological analysis

# Morphological analysis

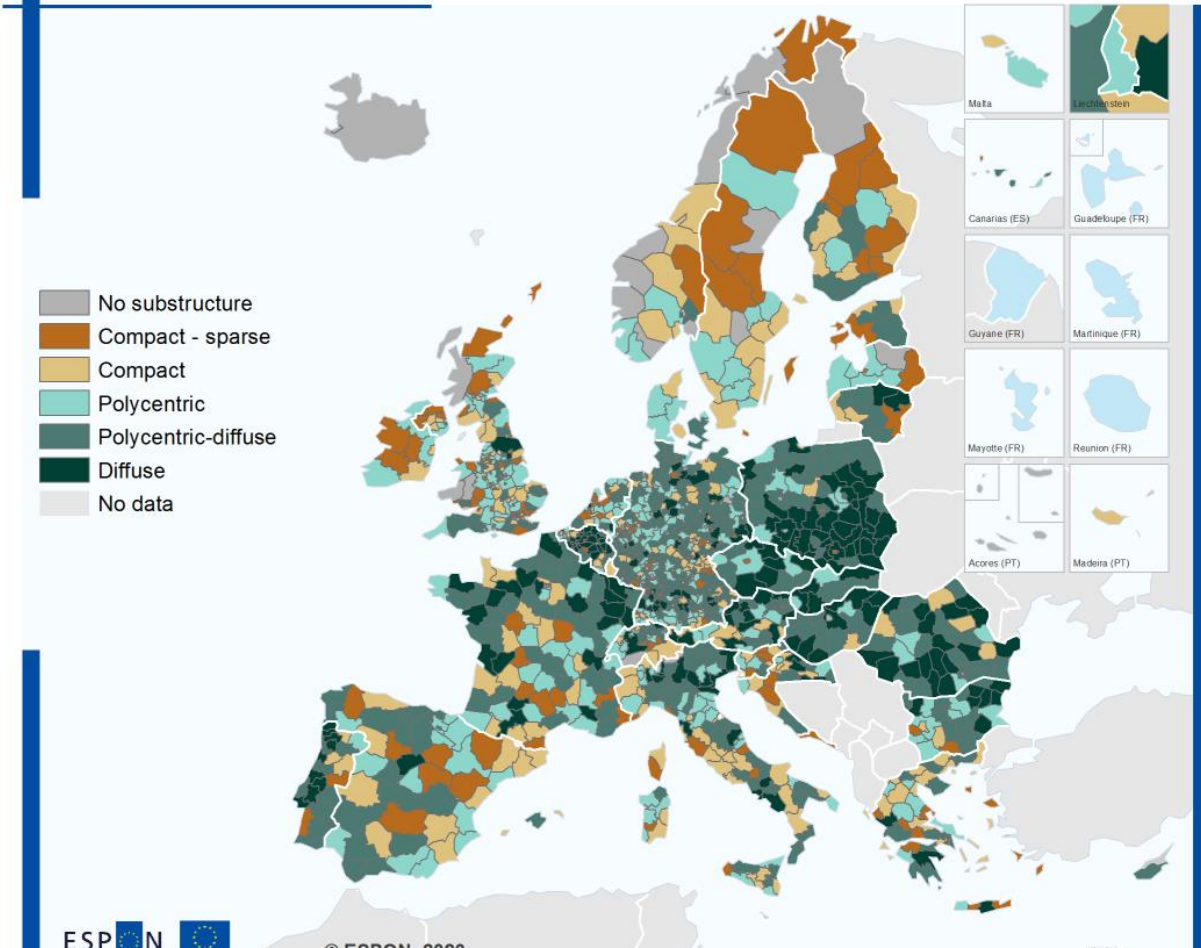

- Polycentric regions were the most frequently occurring structure in Europe
- diffuse development in the substructure as frequent around monocentric as polycentric regions

### Morphological analysis (main form)

### Morphological analysis (substructure)

# Conclusions on developments

- **Urbanization is nowhere near zero**
  - Virtually all regions are growing in absolute terms and per capita
  - Urbanization is unidirectional: over 8x of land is converted to than from urban
  - Seems to be slowing since 2000
- **Geographic specificities**
  - Some countries are slowing (ES, NL) while others accelerating (PL, UK)
  - Urban form is varied and tends to replicate itself

2

## Scenarios for 2050

# Three modes of urbanisation

- **Compact / containment**

- High-density compact cities with land-take close to zero
- Growth boundaries (e.g. greenbelts), infill development, brownfield redevelopment

- **Polycentric / clustered**

- Medium-density, clustered, polycentric urban structure
- Planned new towns, TOD, some new urbanist designs

- **Diffuse / scattered**

- Low-density, scattered/discontinuous, car-oriented
- Organic growth, home ownership and mobility support

# Diffuse scenario

Bruxelles-Antwerp region, Belgium

Bologna-Ravenna region, Italy

Randstad region, Netherlands

# Polycentric scenario

Bruxelles-Antwerp region, Belgium

Bologna-Ravenna region, Italy

Randstad region, Netherlands

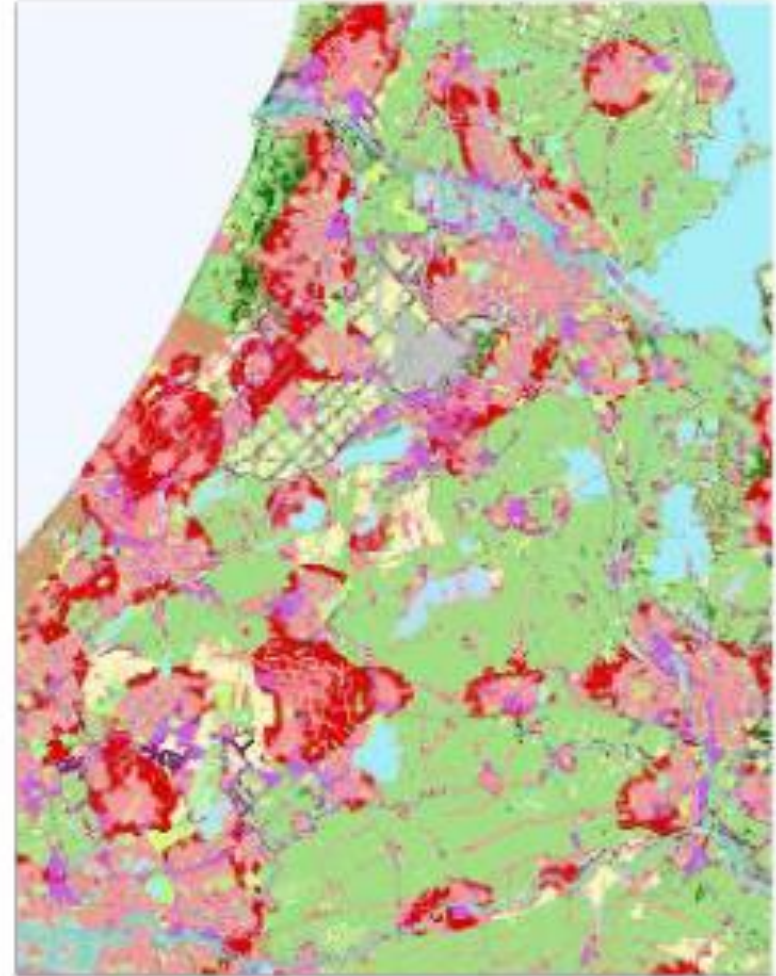

# Compact scenario

Bruxelles-Antwerp region, Belgium

Bologna-Ravenna region, Italy

Randstad region, Netherlands

# Urban growth

	Compact	Polycentric	Diffuse
<b>Economic sustainability</b>			
GDP, wealth	+/-*	++	+
Public finance	++	+	-
Jobs	++	++	+/-
Accessibility	+/-	++	+/-
Business areas	++	++	+/-
Housing demand / new construction	-	+	+
Transportation costs	+/-	+	--
Energy consumption	+	+	--
<b>Ecological sustainability</b>			
Reducing mobility (by car)	++	++	--
Reducing pollution, including CO2	++	+	--
Green urban areas	-	+	-/+
Biodiversity	+/-	+/-	--
Land consumption	+	+	--
Natural hazards – risk and vulnerability	-	+	+/-
Climate change adaptation/mitigation	+/-	+	+/-
Consumption of resources	+/-	+	-
Space for future renewable energy	+/-	+/-	+/-
Space for future water retention	+	+	+
Space for future circular economy	+	+	-
<b>Social sustainability</b>			
Health	+/-	+/-	+/-
Affordable housing	+/-	+/-	++
Equity/inclusion	+/-	+	--
Public and recreational space	+/-	+	+/-
Variety (high-rise, suburban, etc)	+	+	+
Mixed-use areas	+	++	-
Satisfaction with home environment	+/-	+	+

\* For the sake of readability, findings are presented in a synthetic way, omitting the references and averaging out the weights for each indicator (+/- usually means conflicting findings between studies).

# Scenario conclusions

- **Urban form matters for sustainability**

- Some regions inherited certain forms, hard to change
- Still some developments perceptible in 2000-2018 period
- Scenarios allow for a political discussion on desired developments

- **Assessing urbanization modes**

- Cartographic: which (types of) areas are urbanized in each scenario?
- Statistical: how does urban growth and population density develop?
- Multicriteria: how do the modes score on various (important) indicators?
