

SPIMA

Spatial dynamics and strategic planning in metropolitan areas

Dr. Vanya Simeonova

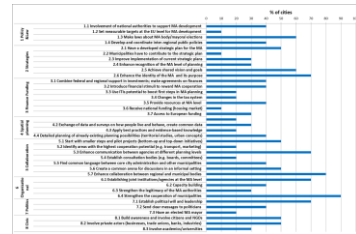

Wageningen Environmental Research
Wageningen University and research, The Netherlands

SPIMA Framework for Metropolitan Planning

Key outcomes:

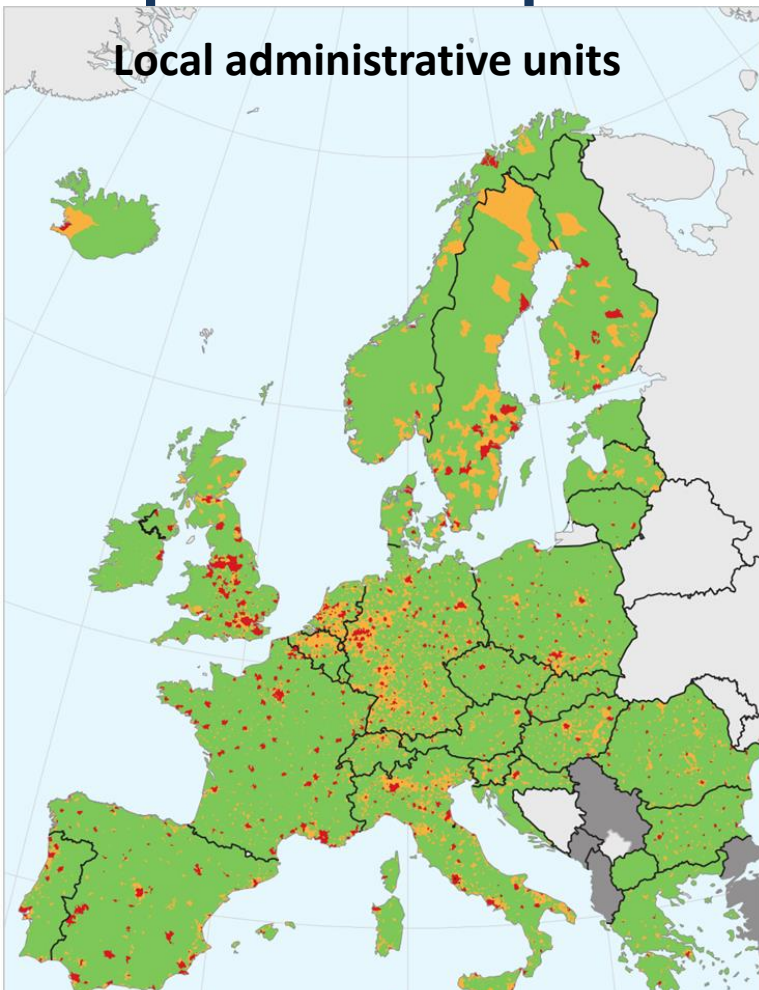

- Delineation of the Metropolitan areas
- Statistical review of urban trends and spatial dynamics
- Analysis of challenges and institutional frameworks
- Analysis of success factors, incentives and triggers
- Typology and relevant policy tools in MA planning
- Guidelines for MPA “Eight actions areas”

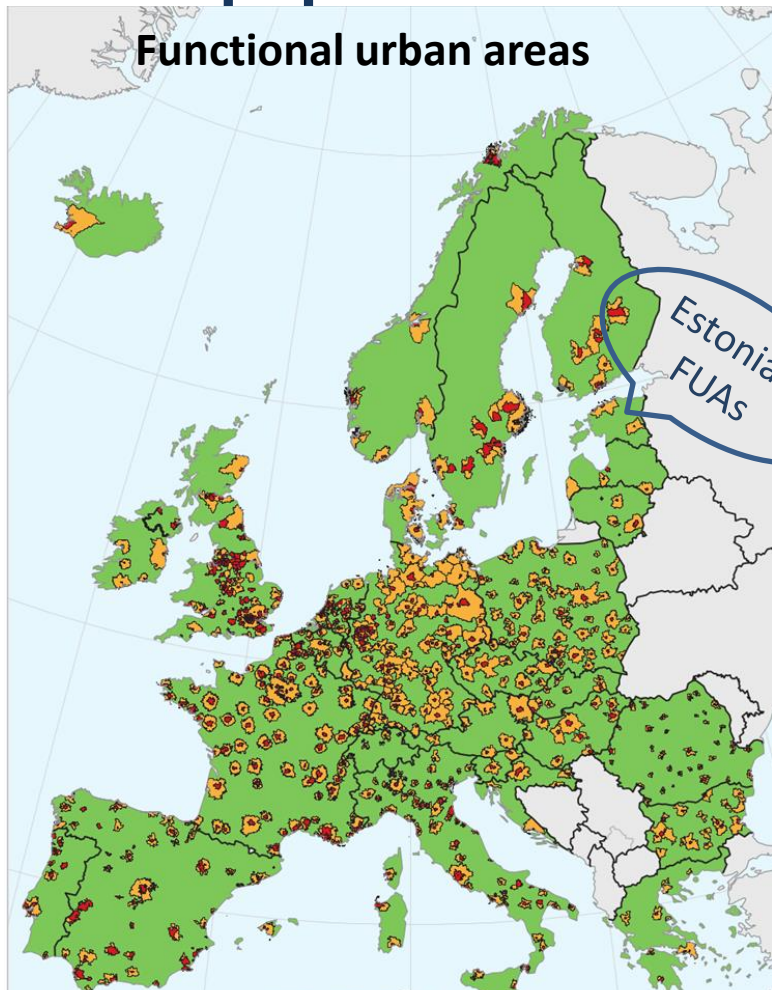

Metropolitan Europe: 75% urban population

Local administrative units

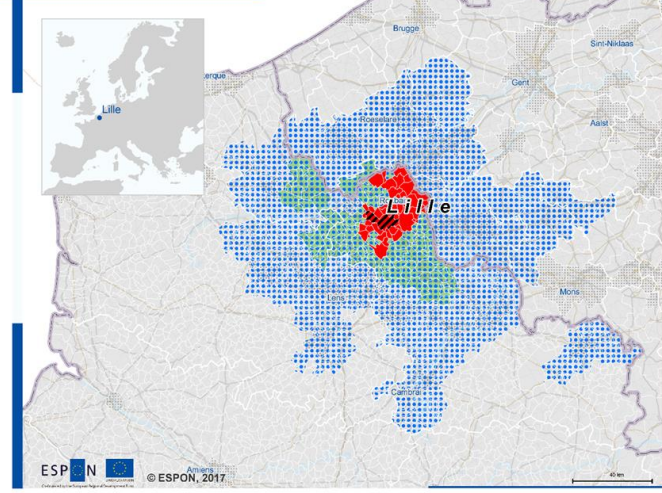

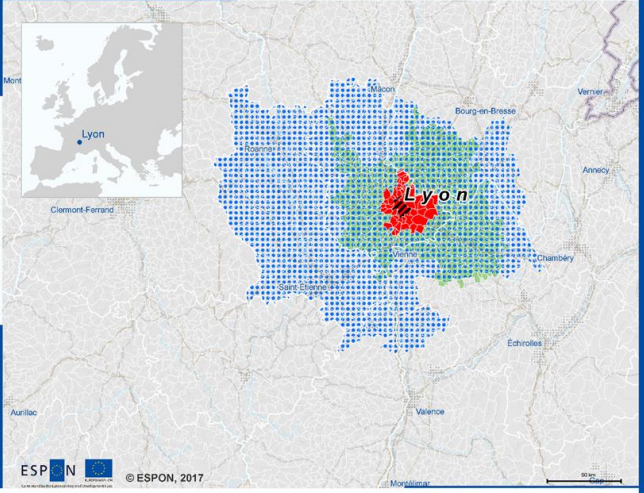

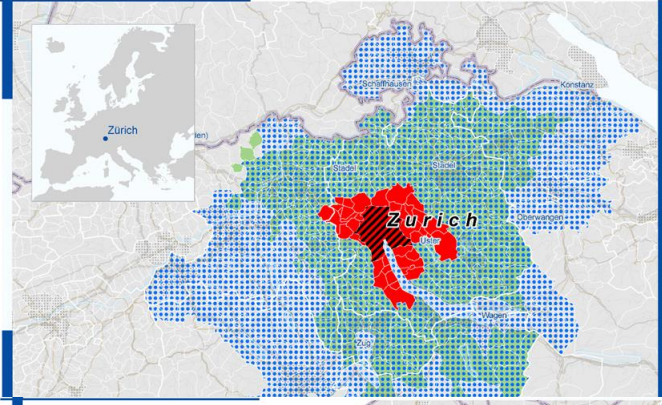

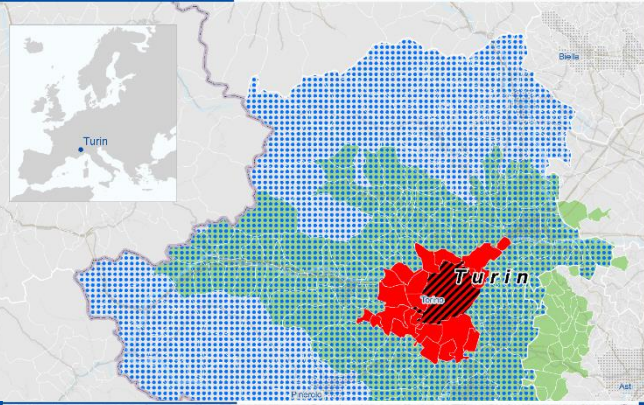

Functional urban areas

SPIMA cities:

- Vienna
- Zurich
- Oslo
- Terrassa
- Turin
- Prague
- Brno
- Brussels
- Lille
- Lyon

Estonia's
FUAs

- Core city municipality
- MUA of the core city (ESPON 2013 Database)
- Surrounding MUA's (ESPON 2013 Database)
- Metropolitan Development Area (MDA)
- FUA of the core city (ESPON 2013 Database)
- National border
- Railroad
- Motorway
- Primary road
- Other road

Evidence from the SPIMA cities

Challenges of MA development: 51 in 8 sectors

Key challenges:

- **Transport:** efficient transport infrastructure-congestions; mobility and accessibility
- **Institutional:**

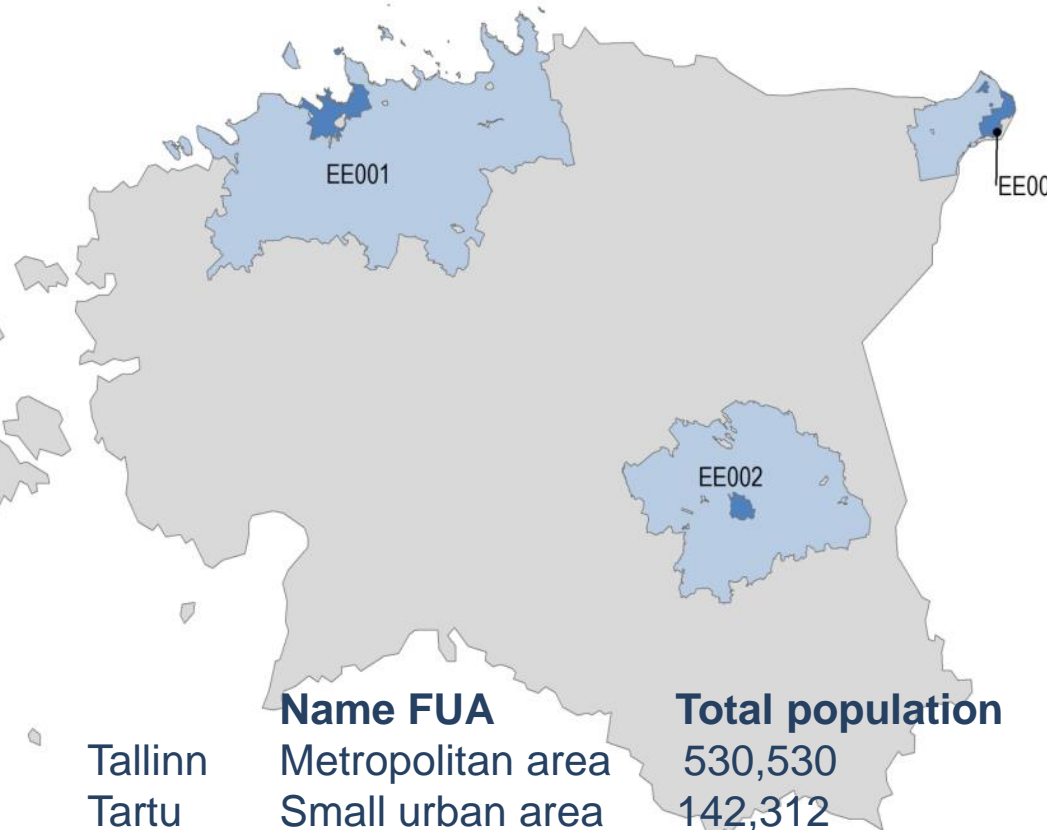

Need for multilevel collaboration and political commitment and recognition of the metropolitan regions

- **Spatial:** need for a shared spatial strategy and vision on efficient land use and growth management: suburbanization, population growth, taxes, environment, affordable housing

Three FUA's in Estonia: 56% of the population

Challenges of the transition from centrally planned system to a market economy:

- Suburbanization and densification
- Socio-economic restructuring
- Preconditions for growth strategies: residential, employment locations
- Weak local administrative capacity
- Need for urban-rural relations, integrated mobility networks, collaboration between urban-rural municipalities

Source: OECD (2016)

The key issue of today's metropolitan regions?

How the traditional planning practices shall respond to urbanization beyond the jurisdictions of a single administrative authority?

Key findings of SPIMA

- **Understanding the territory:**
where people live, work and commute
(housing, jobs, transport, green...)
- **Shared Governance process:**
Institutional arrangements
(formal/informal/semiformal)

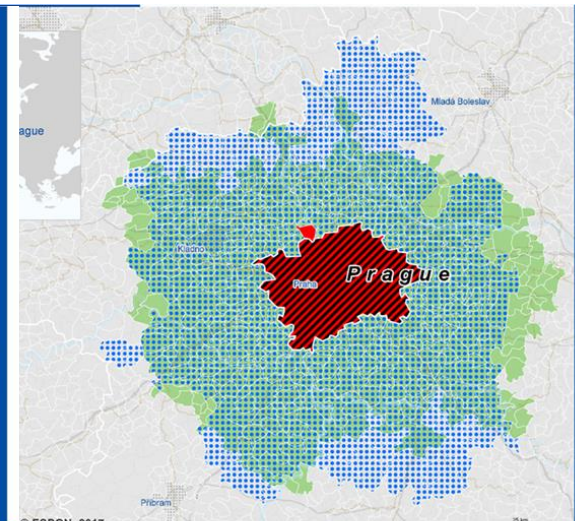

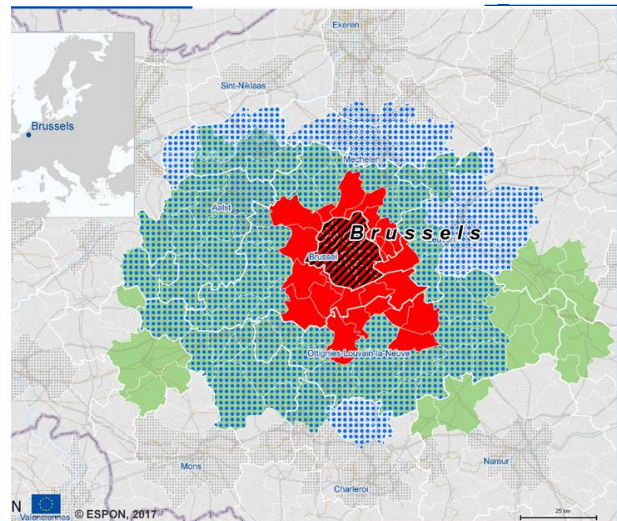

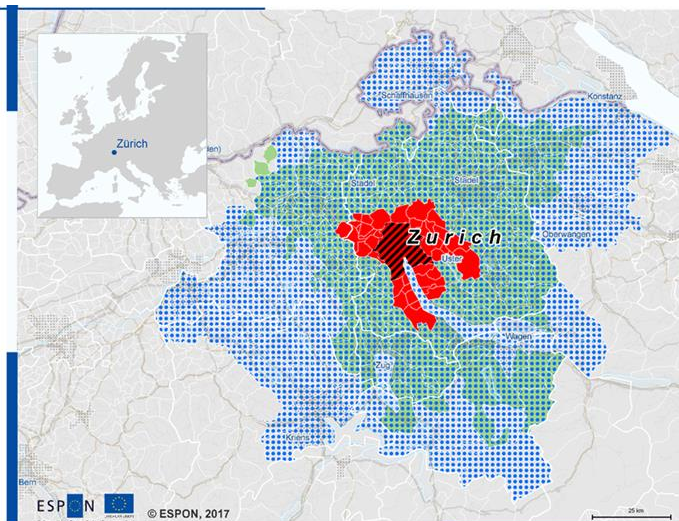

**There is no one single definition
of a metropolitan area...**

**...that matches the urbanization trends,
administrative borders, planning practices
and perceptions of local actors**

Tailor-made approach for assessing spatial dynamics: Metropolitan Development Area (MDA)

- Core city municipality
- MUA of the core city (ESPON 2013 Database)
- Surrounding MUA's (ESPON 2013 Database)
- Metropolitan Development Area (MDA)
- FUA of the core city (ESPON 2013 Database)
- National border
- Railroad
- Motorway
- Primary road
- Other road
- rivers

Territorial level: LAU2 (version 2011)

LAUs: 563 (Inter-cantonal)

135 (Inter-regional)

515 (ITI)

Most **spatial** planning systems do not embed metropolitan governance process:

- Seldom any **spatial plans** for metropolitan areas
- Ad-hoc experiences: single strategic or collaborative initiatives
- Lack of a systematic planning approach and a policy framework for metropolitan cities/regions

*Metropolitan areas
spatial development challenges*

Strategic locations, urban sprawl, jobs and housing, connected suburbs, regional infrastructures, amenities, mobility, environment, local government finance, actors' involvement

Governance of spatial planning

Strategic planning

Statutory planning

Collaborative planning

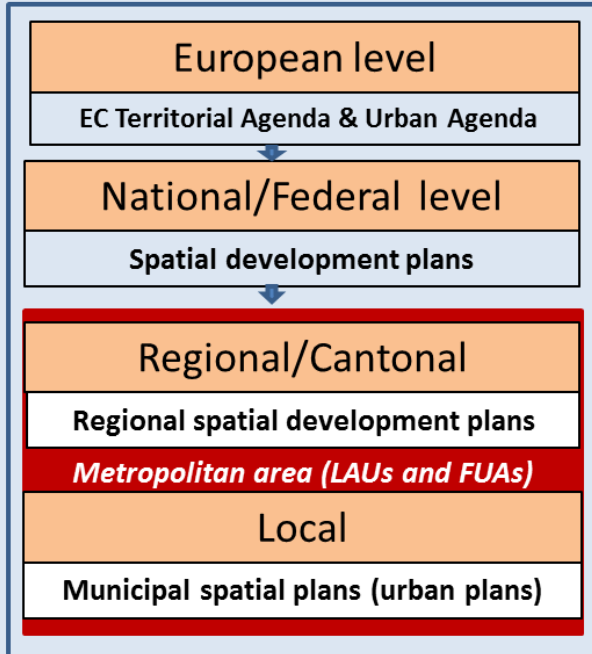

Sustainable metropolitan development

Levels of spatial planning governance:

What issue at what level of planning ?

Horizontal coordination between spatial planning and sectoral policies

Vertical coordination in spatial planning

Policy issues of the SPIMA stakeholders:

- Transport & Mobility
- Accessibility
- Urban sprawl
- Housing
- Jobs
- Public services
- Tourism and rural development
- Environment & Landscape
- Finance
- Actors' involvement

Coherent territorial development of regions and municipalities

Informal versus Formal Status of MA?

- The **formal status** of the metropolitan area **is not a critical factor** for effective metropolitan governance
- Recognition and embedment in a **national/regional policy framework** is a key incentive

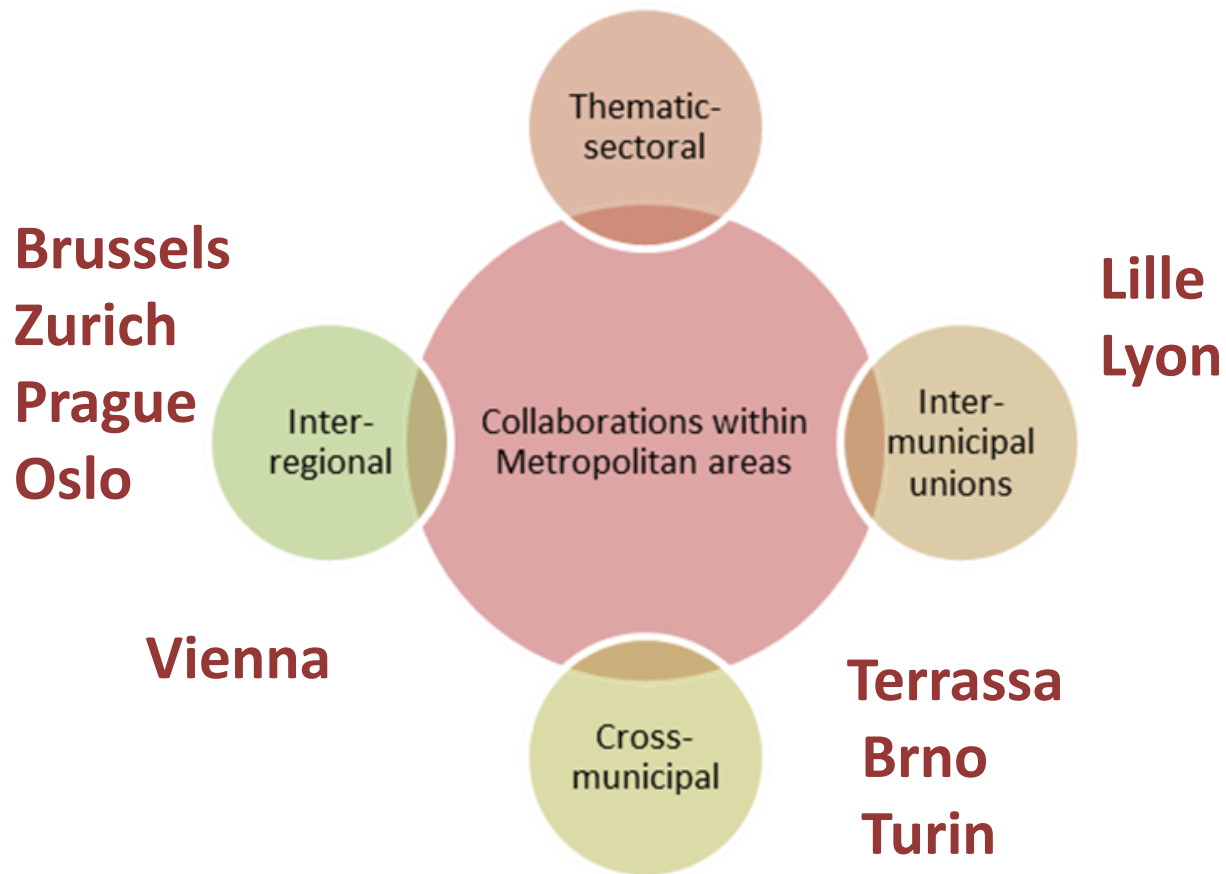

| Stakeholder area | Status of the metropolitan area |
|------------------|---------------------------------|
| Vienna | Infomal |
| Zurich | Semi-formal |
| Prague | Infomal |
| Brussels | Semi-formal |
| Brno | Infomal |
| Oslo & Akershus | Infomal |
| Turin | Formal |
| Terrassa | Infomal |
| Lille | Formal |
| Lyon | Formal |

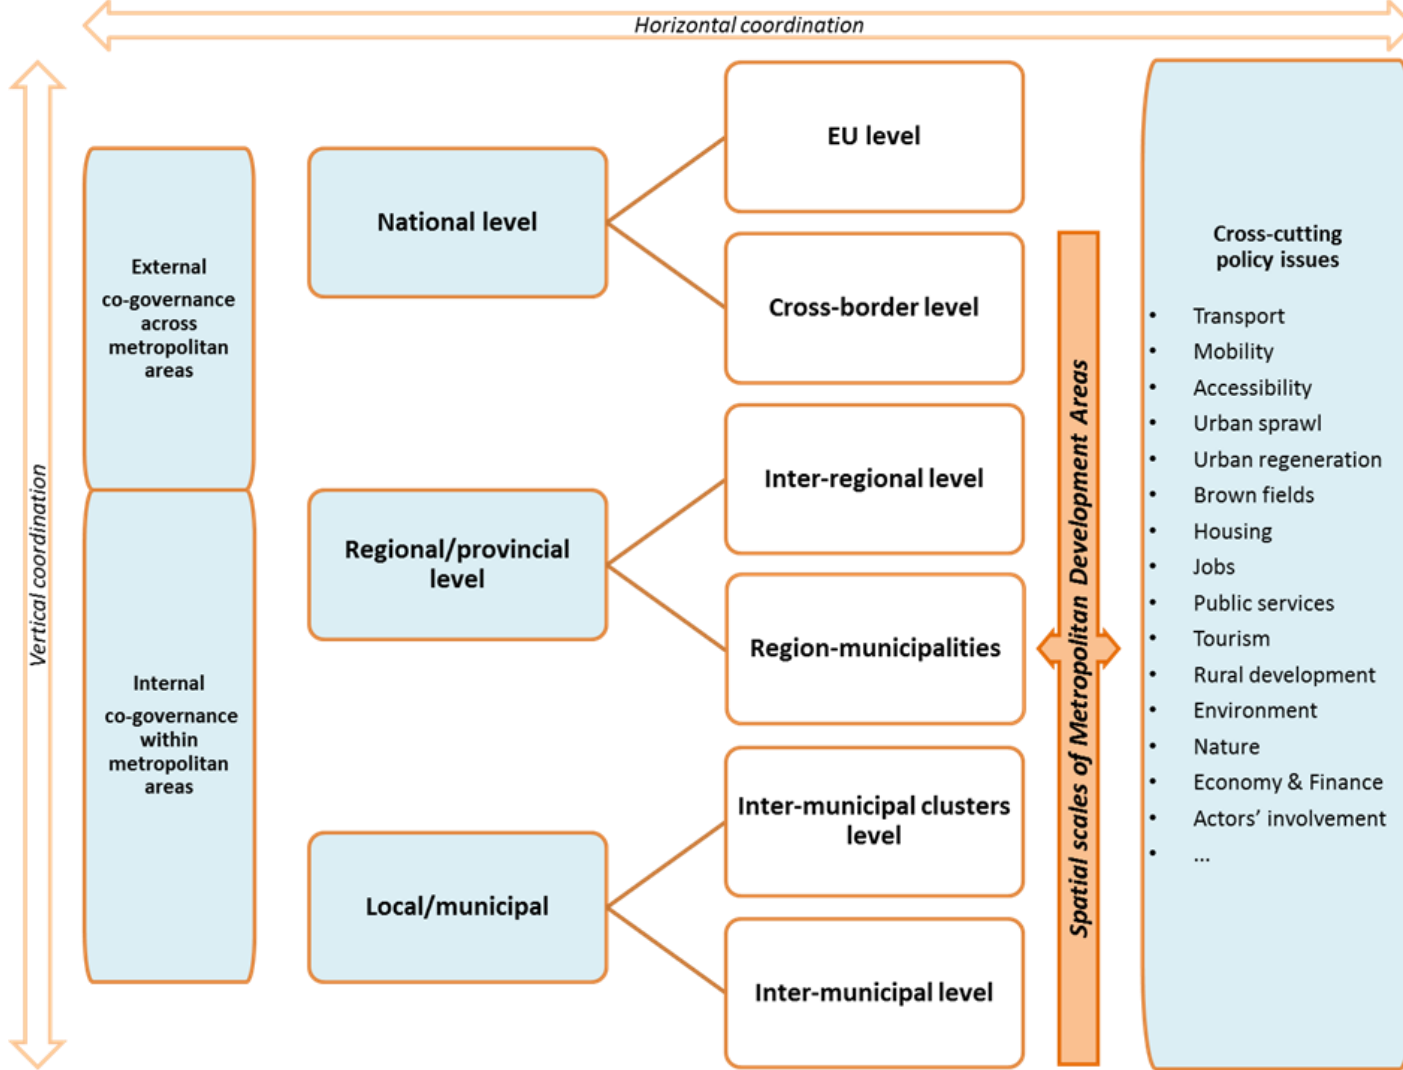

Involvement of formal planning levels

Informal collaborative arrangements

Key success factors:

- Engaging political leaders to gain commitment at all governance levels of planning
- Policy framework for MA development
- Funding (national, regional, EU (ITIs))
- Common benefits in sustainable developments (growth poles & shared services)

Triggers to MA Governance

- Top-down and bottom-up collaboration
- Decentralization of planning requires strong local administrative capacity
- Motivation: commonly recognized issues
- Upscaling bottom-up projects
- Common benefits-minimum gain for all
- Funds and joint coordinating bodies
- “Rules of the game”: collaborative policy tools and growth management (infrastructure, environment, service).

Metropolitan planning approach

Guidelines for policy makers and planners:

Eight “action areas”:
policy tools to support
spatial planning
governance at
metropolitan scale

European cities and MPA:

- The current planning systems address metropolitan development to a **limited extent**
- Different progress: varying from single initiatives in **strategic, statutory and collaborative planning**
- In many areas the **implementation of MPA lags behind.**

Typology of European MAs: A benchmarking tool

Typology A for metropolitan areas based on size of the metropolitan area (MA) and population density

| Population density (number of inhabitants per km ²) | Size of MA (km ²) | | |
|--|---|--|---|
| | Large-sized (>7000) | Medium-sized (2000-7000) | Small-sized (<2000) |
| Moderate to high population density (≥500) | Type 1: Large-sized MA with moderate to high population density | Type 3: Medium-sized MA with moderate to high population density | Type 5: Small-sized MA with moderate to high population density |
| Low population density (<500) | Type 2: Large-sized MA with low population density | Type 4: Medium-sized MA with low population density | Type 6: Small-sized MA with low population density |

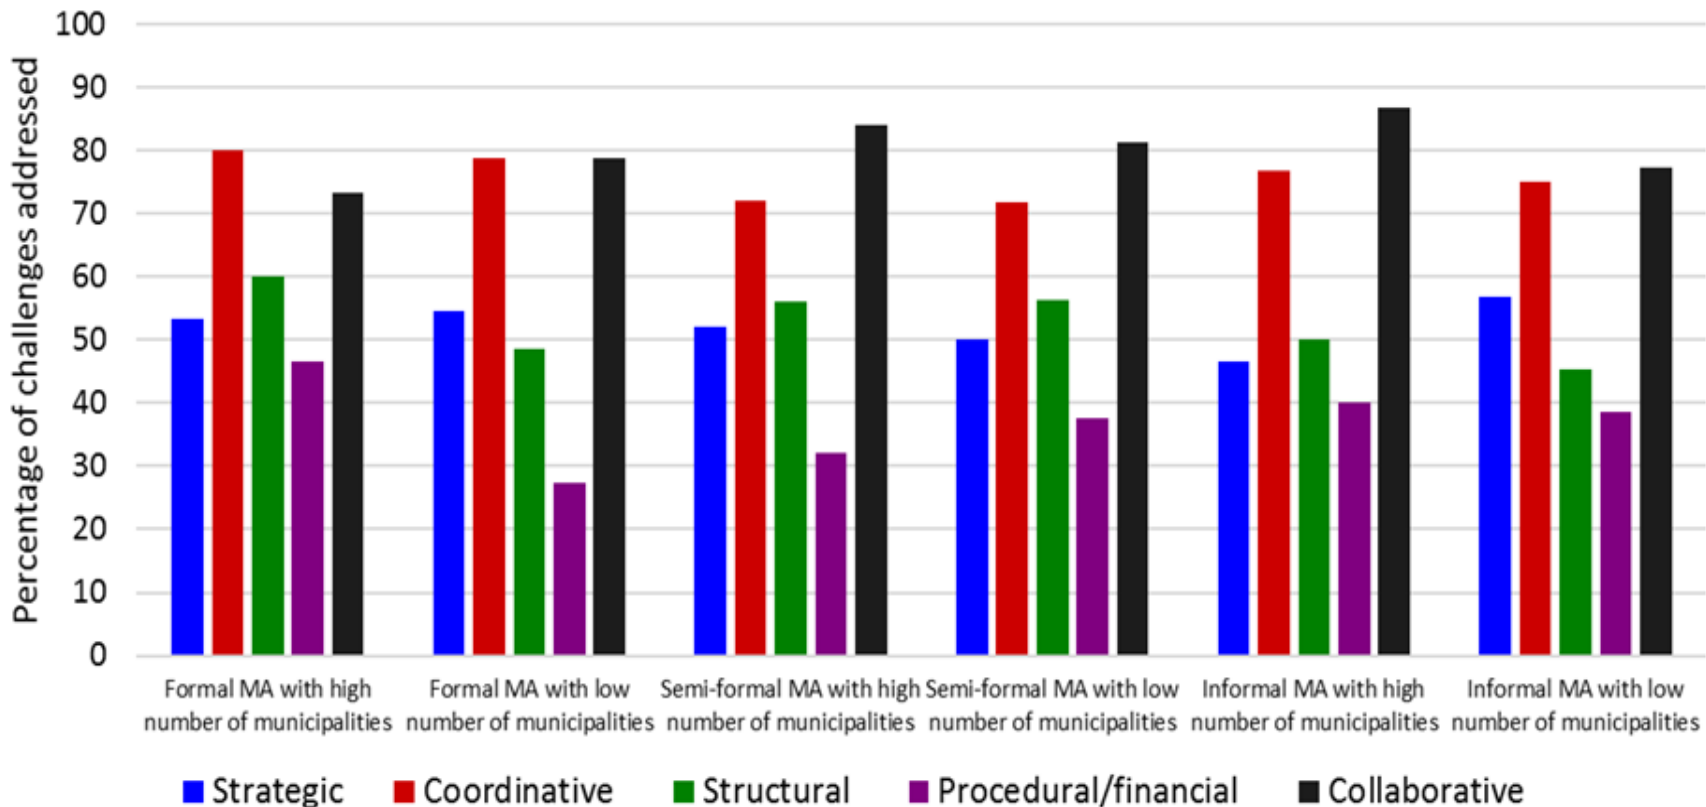

Typology B for metropolitan areas based on the status of the metropolitan area (MA) and number of municipalities

| Number of municipalities | Status of metropolitan area | | |
|--------------------------------------|--|---|--|
| | Formal (based on law/regulation) | Semi-formal (based on agreements) | Informal (based on collaboration) |
| High number of municipalities (≥500) | Type 1: Formal MA with high number of municipalities | Type 3: Semi-formal MA with high number of municipalities | Type 5: Informal MA with high number of municipalities |
| Low number of municipalities (<500) | Type 2: Formal MA with low number of municipalities | Type 4: Semi-formal MA with low number of municipalities | Type 6: Informal MA with low number of municipalities |

Relevant policy tools based on status of the MA

Relative importance of policy tools in addressing challenges

Policy implications

- Redefining the metropolitan areas as clusters of administrative and/or functional areas: understanding the delineation of the area as mix of functional flows and trends (MDA)
- Enhance the role of spatial planning policies for managing urban growth in metropolitan development: setting different foci in strategic, statutory and collaborative planning, decision-making
- Enhancing the role of EU policy in promoting sustainable metropolitan policies and collaboration at local and regional levels
