

# SPIMA Targeted Analysis

## Final Conference

Findings and recommendations

6 February, 2018

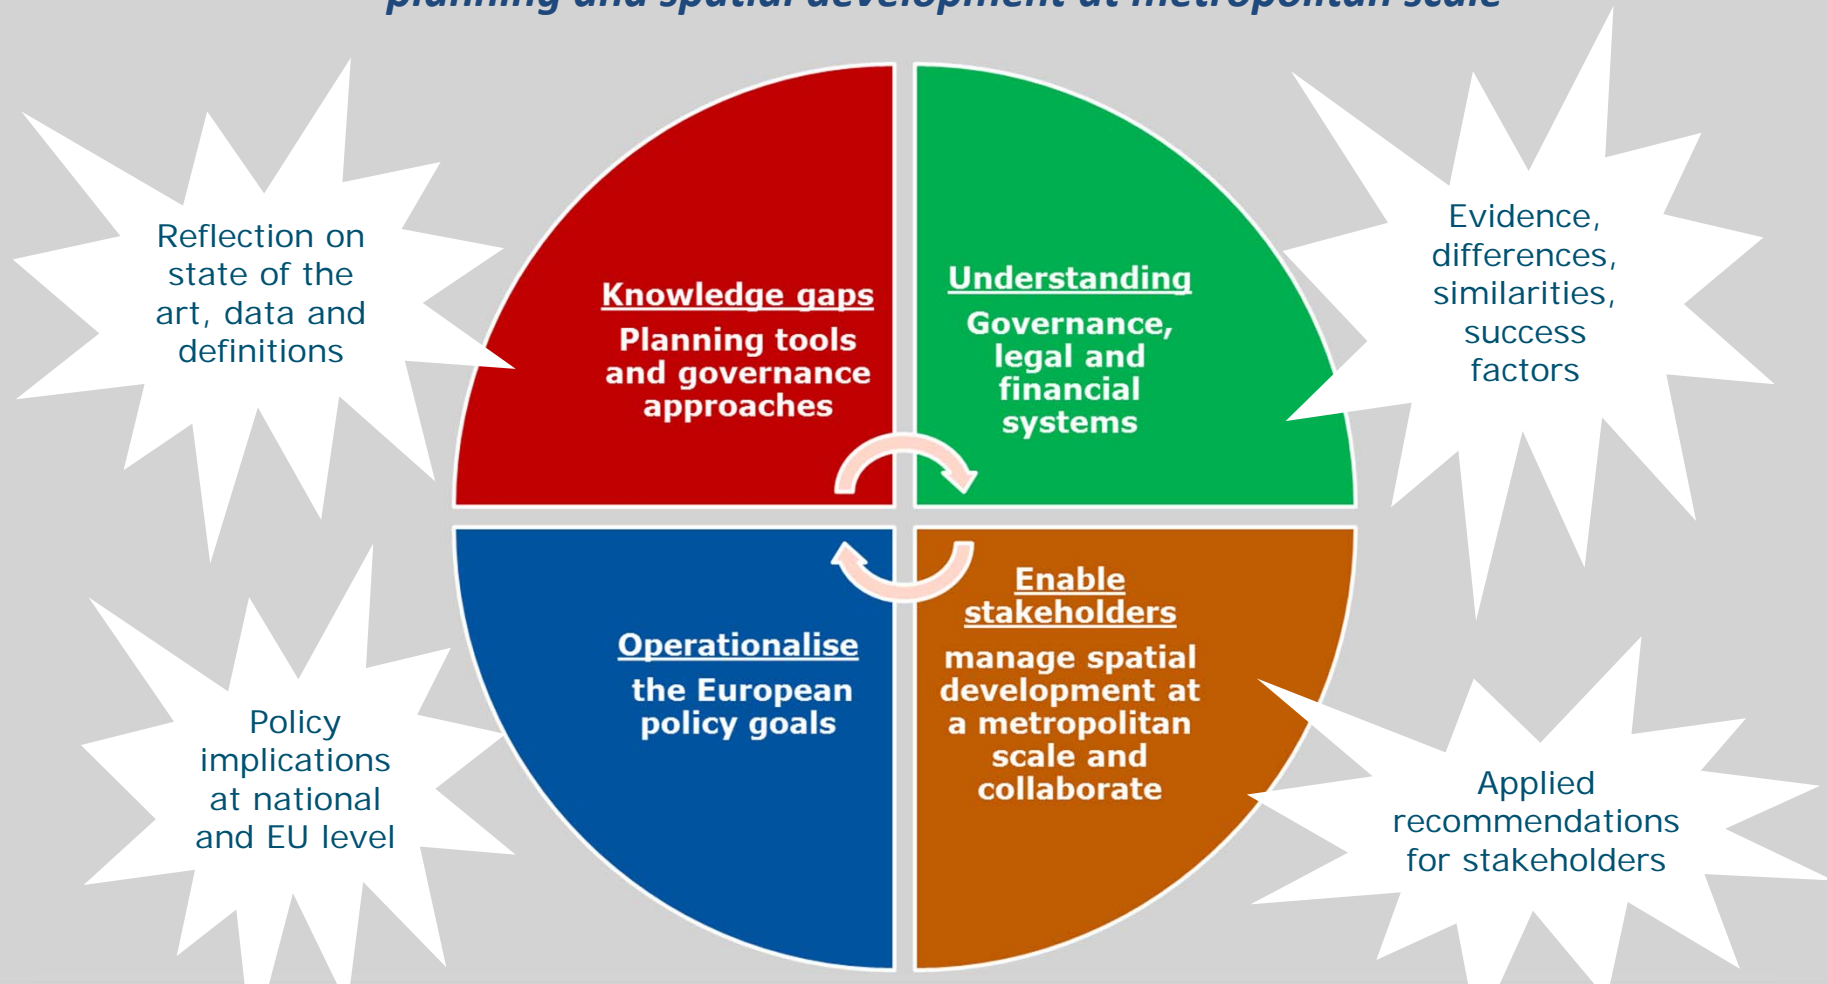

Dr. Vanya Simeonova

Inspire policy making by territorial evidence

# SPIMA objectives

*To identify policy tools to achieve strategic spatial policy goals, by linking strategic planning and spatial development at metropolitan scale*

# SPIMA: policy-research endeavour

## 10 Stakeholders:

- Lille
- Lyon
- Vienna
- Turin
- Terrassa
- Oslo
- Prague
- Brno
- Zurich
- Brussels

## Experts:

SPIMA Research Team

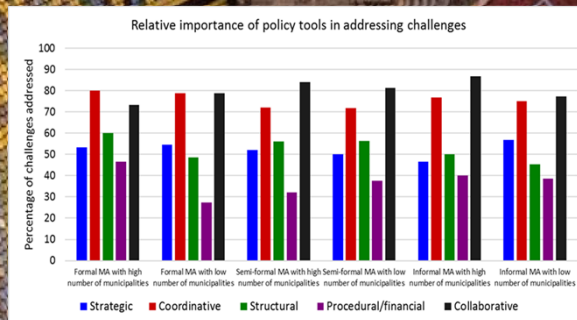

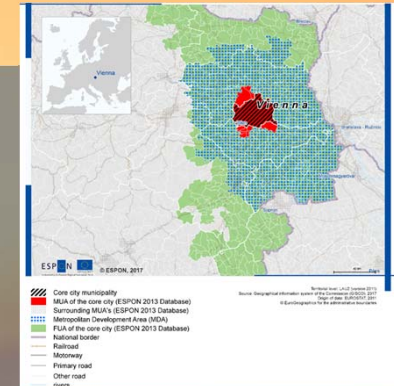

Eurocities Working Group

ESPON-EGTC

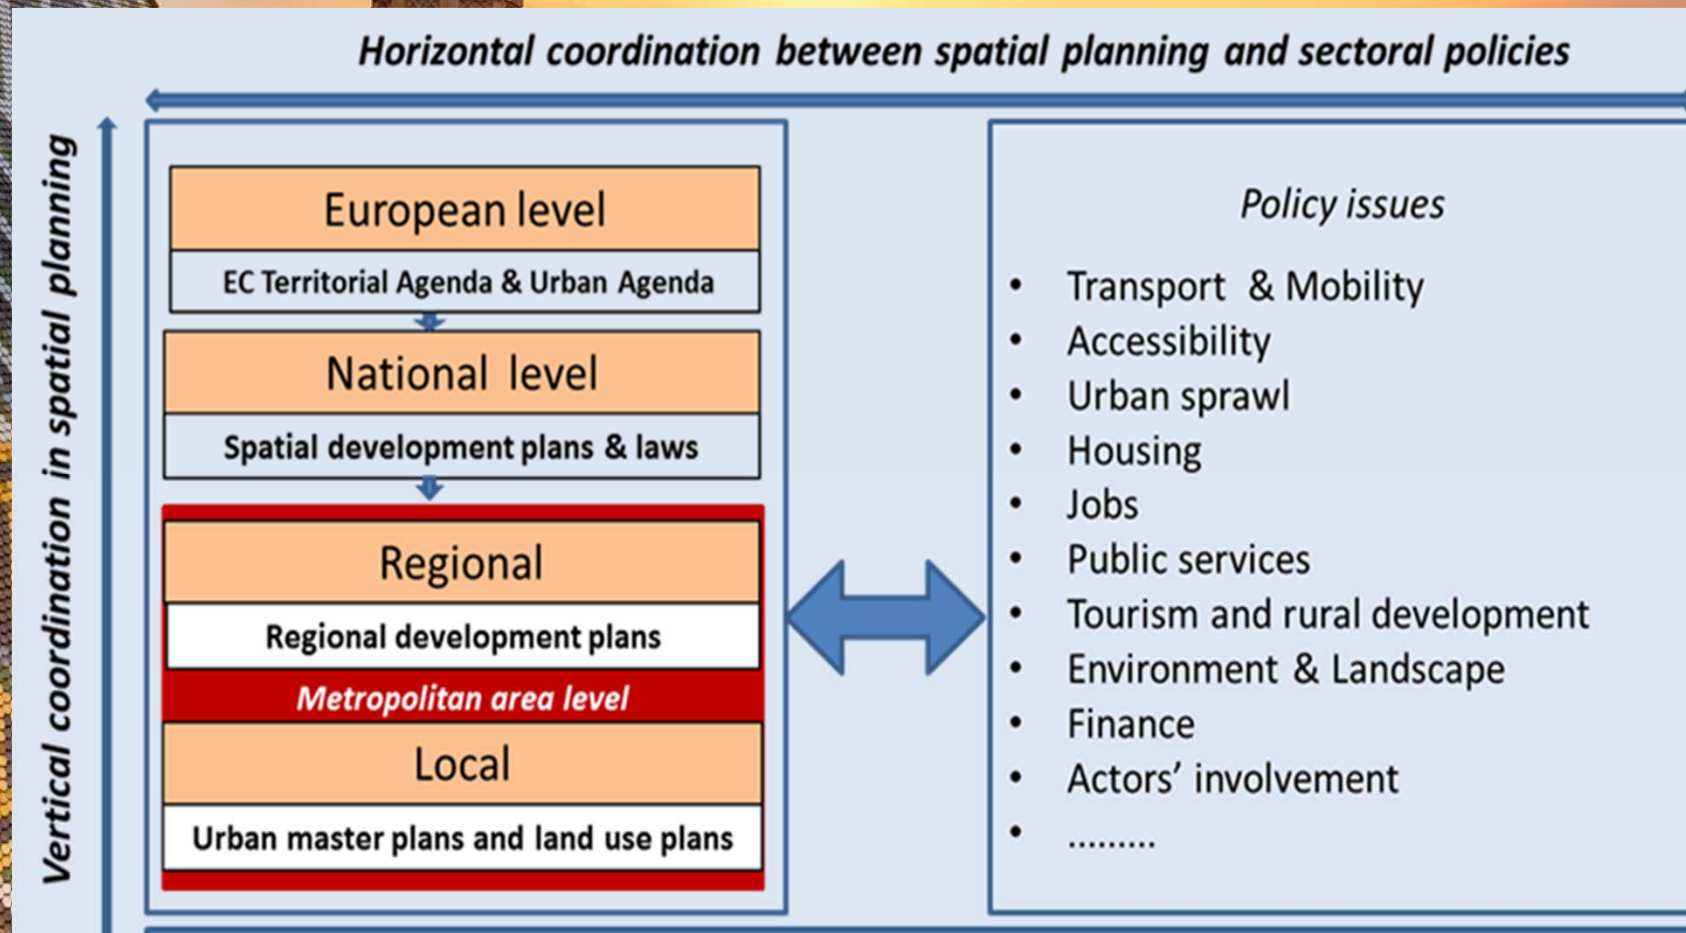

# SPIMA- A framework for a Metropolitan Planning Approach

- Definitions and spatial characteristics for delineating MAs
- Urban trends and spatial dynamics
- Current challenges and institutional frameworks
- Success factors, incentives and policy tools
- Common approach for extrapolation (Typology)
- Policy implications
- Guidelines with recommendations

# Assembling the puzzle of Metropolitan Planning?

**10 cities:**  
Institutional analysis, spatial analysis,  
policy and planning practice analysis

# Methodology

## SPIMA data collection and analysis

### Hard data collection

Local city data  
Documents  
Reports  
Strategic plans  
Statistical data  
GIS data  
Literature

### Soft data collection

Interviews with key actors in the metropolitan areas

**75 interviews**

### Elaboration of profiles

Categorizing & integrating data  
Assessment of profiles of the metropolitan areas

### Comparative case study analysis

Prioritizing challenges, incentives, opportunities per stakeholder area

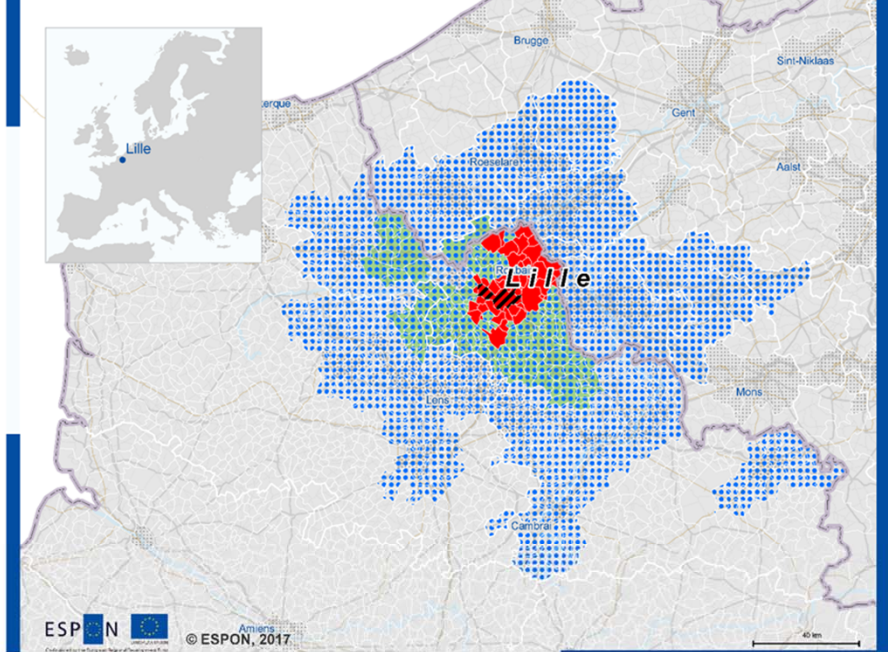

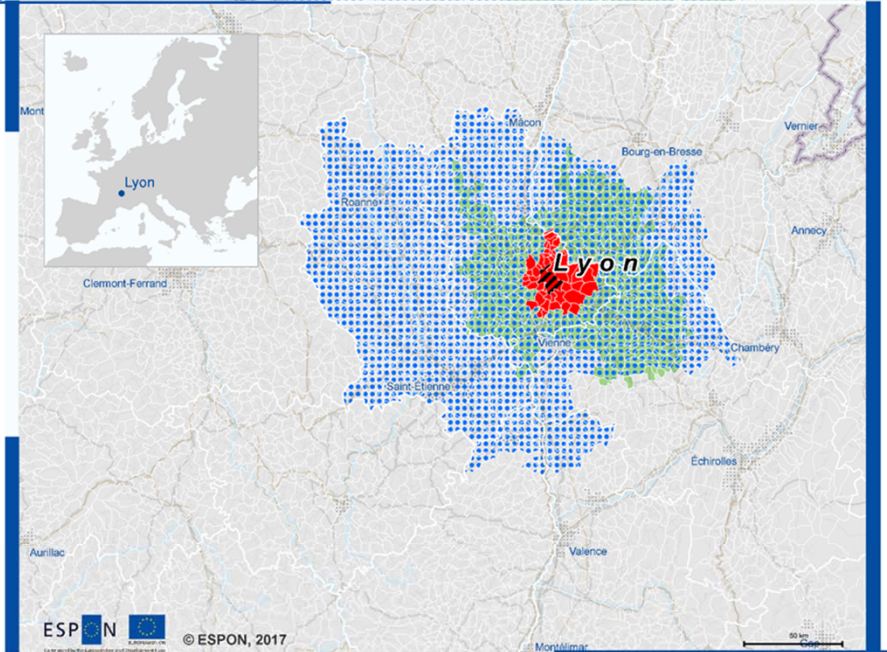

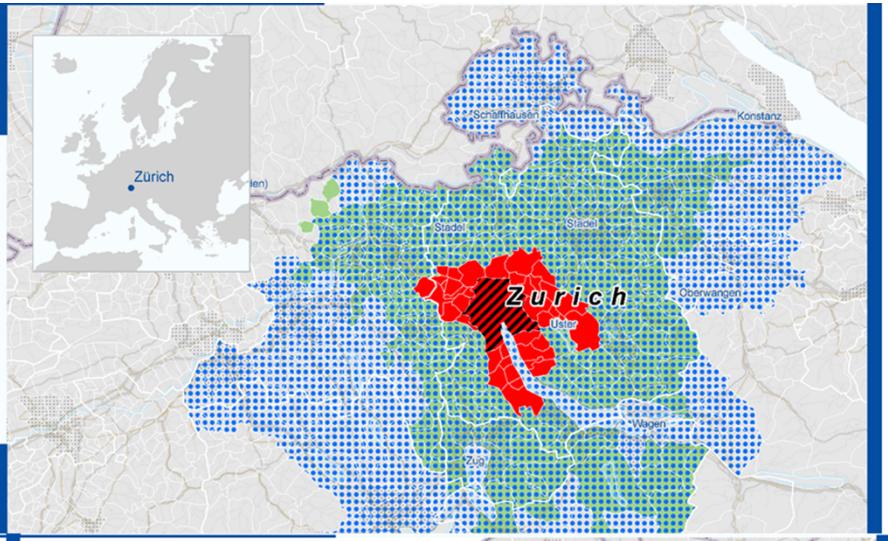

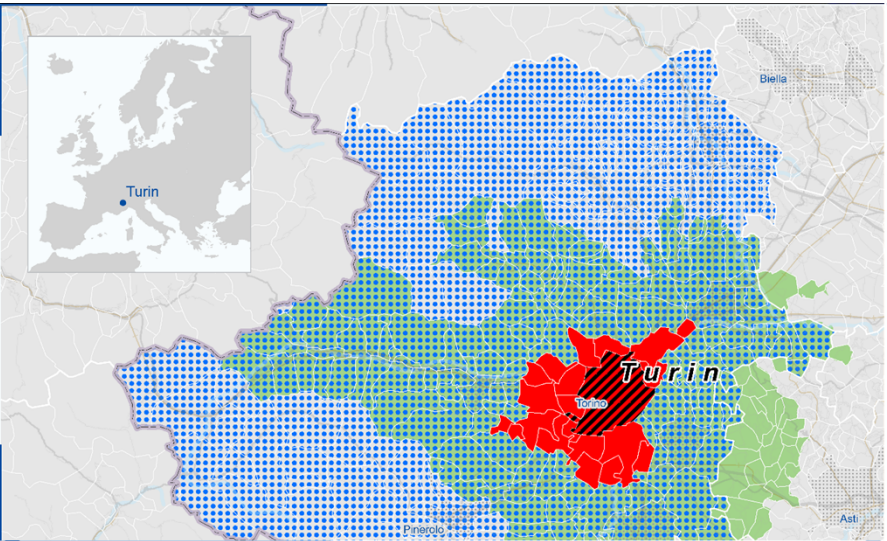

### Findings and guidelines

Formulating key findings  
Typology of metropolitan areas  
Guidelines for metropolitan planning approach

## Delimiting metropolitan areas

**MDA method of delineation offers a tailor-made assessment of different spatial sales and key urban trends based on European and local data**

- There is no one single definition of a metropolitan area that matches ongoing urbanization trends, current administrative borders or existing planning practices and perceptions of actors.
- Definitions are based on formal/semiformal or informal arrangements or perceptions of what the MA territory is, varying between cross-border, interregional, regional, and inter-municipal arrangements.
- Metropolitan development fosters moving away from spatial development of a single, compact urban core towards complex urban networks

## Key socio-economic and environmental trends and spatial dynamics

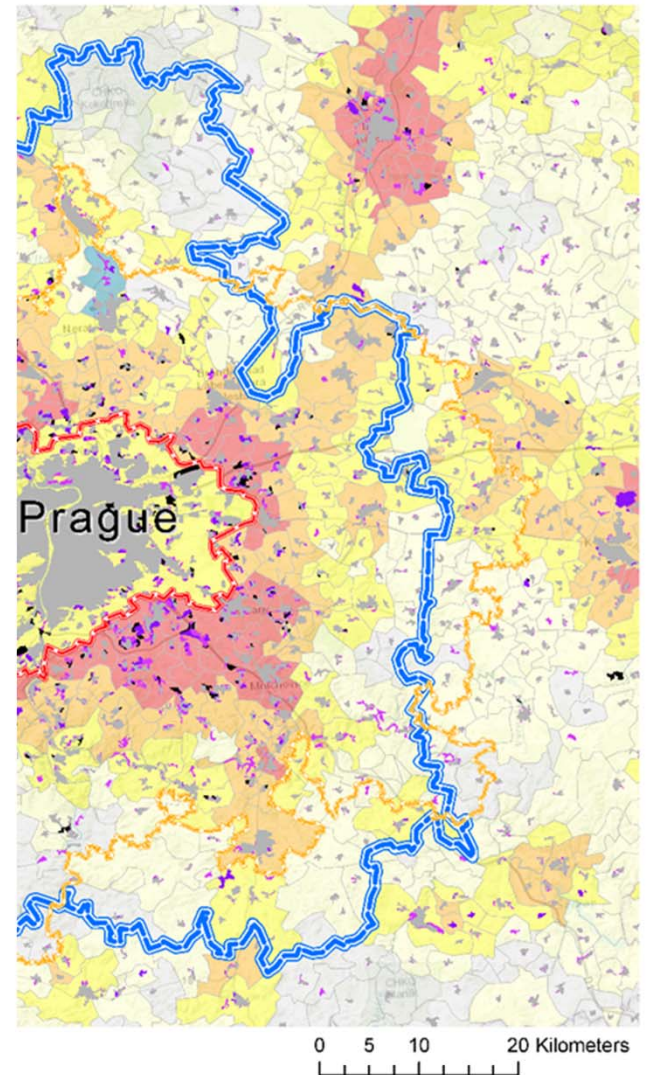

- Most areas represent current or potential polycentric development and a certain degree of metropolitization
- Generally increasing urbanization trend
- Generally increasing population growth with exceptions
- Dynamic/fragmented population distribution core cities-sub-urban areas
- Generation of growth poles
- Fragmented land use patterns
- Mobility and accessibility needs more efficiency

The relevant scale for planning: supported by additional data and knowledge on the differences in trends between the MUA, FUA and MDA. As soon as additional synchronized data becomes available at the LAU2 level, such an analysis can be extended to other relevant indicators.

### Increase in Night Light Intensity 1992 - 2012

## Success factors, incentives and triggers

- Top-down incentives with bottom-up collaboration initiatives
- Collaboration between dedicated/appointed planning authorities
- Fine-tuning cooperation takes time: start with commonly recognizable issues for most actors: *motivation trigger*
- Involvement of a wider range of stakeholders involvement: business
- A “minimum gain for all” when negotiation and compromise is needed;
- Common funds and agencies at the MA level that may provide expertise and financial incentives (national sources may be included in these pools)
- Engaging political leaders and gaining support from higher levels of government: flexibility in a dynamic environment needs strong leadership
- Ensuring transparency in the collaboration processes
- Setting the “rules of the game”: flexible and fluent co-governance with fixed points (restrictive/legal mechanisms) for growth management (e.g. land-use, infrastructure development, environment protection and social services).

## Typology to generalize relevant policy tools for other metropolitan areas

Relative importance of policy tools in addressing challenges

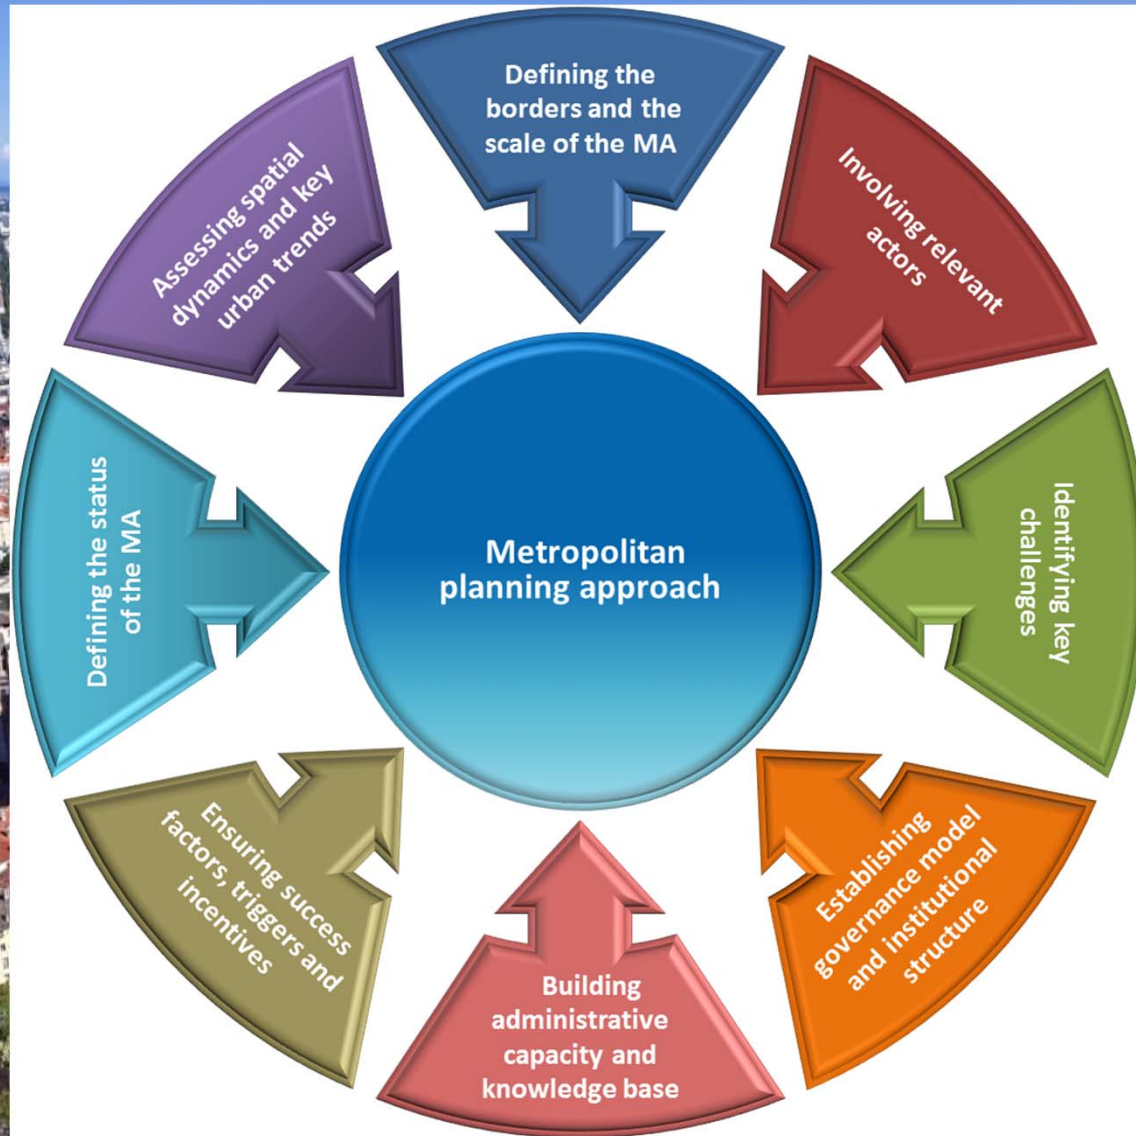

## SPIMA Guidelines: shared-governance at a multilevel scale

## Metropolitan Planning Approach: *It just takes eight Action Areas!*

## Key recommendations –MPA approach

- Decentralization of planning needs strengthening the administrative capacity of local governments.
- Delineation by MDA tailor-made approach: make a “spatial fit” of the MDA with regard to urban trends (decision-support tool)
- Shared-governance: flexible, clearly linked to administrative levels of procedural spatial planning: coordination and shared competencies among governmental levels (vertically) and policy issues (horizontally).
- MPA sets different foci in strategic, statutory and collaborative planning and involves eight specific “action areas”.
- A mix of policy tools: coordination and collaboration, metropolitan bodies to coordinate or collaboration process among multiple actors.
- Formalization of the MAs is not determining factor, whereas acceptance and recognition of the metropolitan areas is an essential trigger.
- EU policy agenda and funding: incentive for regional and local authorities

## Policy implications

- Redefining the metropolitan areas as clusters of administrative and/or functional areas: understanding different delineating approaches
  - The role of spatial planning policies for metropolitan development: setting different foci in strategic, statutory and collaborative planning and decision making
  - Enhancing the role of EU policy and programming in promoting sustainable metropolitan policies and collaborative action at the local and regional levels
- 

# *Towards a sustainable metropolitan future!*

## *Thank you!*
